

CUSTOM DESIGN AND SUPPLY

Keep your operation running by quickly sourcing difficult-to-procure or customised industrial parts and equipment.

Mainstream Engineering (MEL) is a multidiscipline engineering design and project management consultancy. We pride ourselves on delivering effective, safe, value adding solutions that are backed up by our prompt service.

If you need custom or difficult-to-procure parts or equipment, then leave it to us. We have a broad network of suppliers, machine and fabrication specialists, logistics contacts and partners that allow us to deliver solutions in tight time frames.

MEL's experienced engineering design team will review your needs and produce the necessary drawings, specifications and documentation. Utilising our design skills, we look for opportunities to lower maintenance costs and improved life time. MEL will ensure quality requirements are met and then deliver to your site.

Examples of industrial parts and equipment we have supplied:

- Specialist piping and flanges
- Vapour condensers
- Large diameter cast gears
- Industrial fans
- Demisters and mist eliminators
- Materials transfer conveyors
- Industrial valves, flue gas dampers and penstock
- Apron feeder conveyors
